COLUMBIA UNIVERSITY
MEDICAL CENTER

The Nurse Practitioner's Role in Genetics

- Taking a comprehensive 3-generation family pedigrees
- Recognizing signs and symptoms of genetic conditions
- Ordering diagnostic and genetic tests
- Providing counseling and education
- Support to patients and families
- Follow-up monitoring of treatment

Clinical Finding Examples

Targeted Panel

Hypertrophic
Cardiomyopathy
Panel

Brugada Panel

LQTS Panel

What comes first?

Targeted Panels or Whole-Exome?

Targeted Panel  Whole Exome

Examples:

- HCM (20 genes)
- Brugada (7 genes)
- LQTS (12 genes)

- Next generation sequencing
- (Microarray - 10% will have a large deletion/duplication)

Shared Decision Model for Cardiac Care

- A young female suffers an out of hospital cardiac arrest.
- No cardiac or family history
- Normal ECG, echo, exercise test, MRI, etc.
- SCA panel was ordered (10 gene panel) which was negative.
- Shared decision-making model by patient and providers to order a whole exome.
- Whole exome revealed a rare variant.

Reimbursement Considerations

Targeted Cardiac Panels: \$3,375 per panel

Whole Exome Sequencing (Trio: Parents + Proband): \$9,000

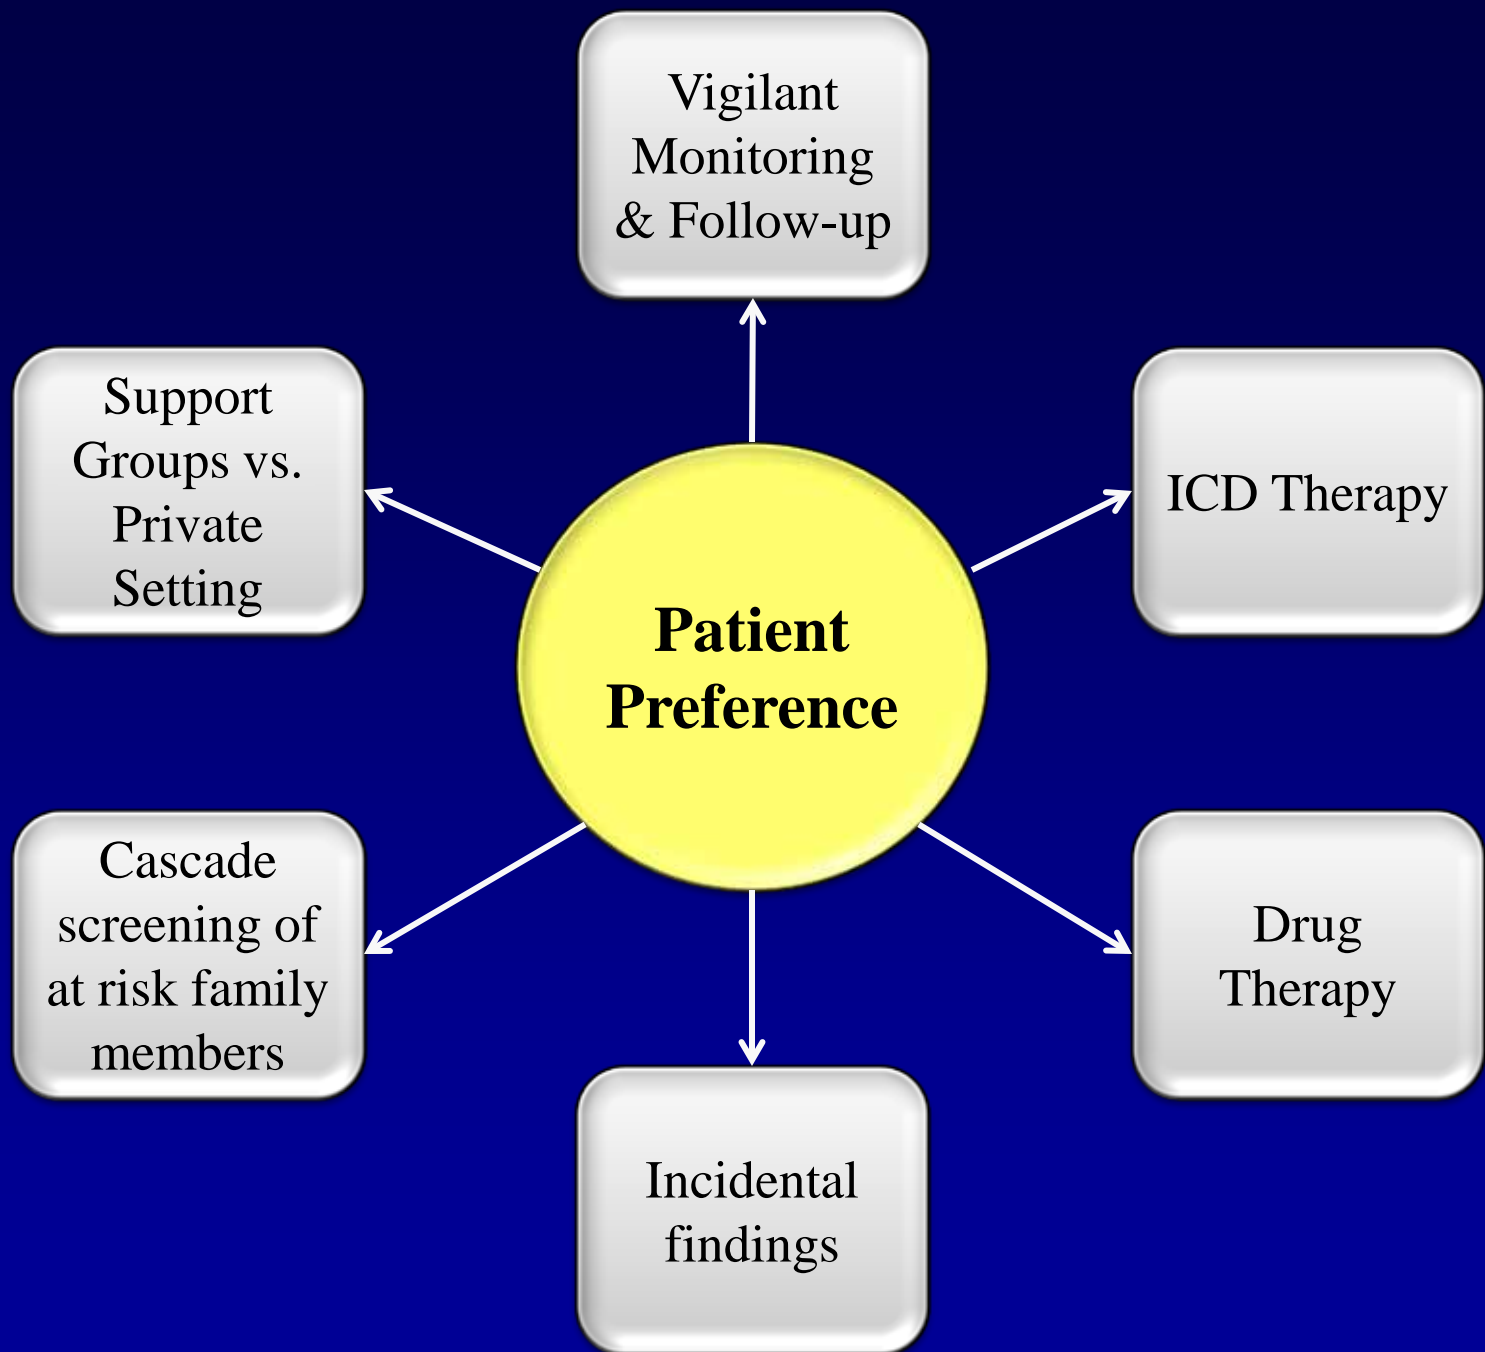

Whole Exome Sequencing (Proband): \$5,000

Whole Exome Sequencing for Additional Family Members: \$2,500

Uninsured: Case-by-case/Payment Plan Option

The Real World Setting

- Serving the diverse population of NYC
- Various levels of health literacy, socioeconomic backgrounds
- Access to care and comprehension
- Patients tend to feel overwhelmed saturated by information in about 30 minutes
- Nurses play a key role in helping individuals understand the complex language
- Sharing the real details-- the nurse practitioner is first in the room & the last to leave

How does a cardiac diagnosis impact patients?

Table 1. Demographics

Variables	
Mean Age (years \pm SD)	42 \pm 11
Marital status (Married)	23%
Education Status	
High School	82%
Some College	10%
Income less than 55,000/per year	96%
Insurance through Medicaid	98%
Family history of SCD under the age of 50 years	33%

N=31
Hispanic Participants

Table 2. Quantitative Results

SF-36 Questionnaire	Mean \pm SD
Physical Component Summary	46.2 \pm 6.6
Mental Component Summary	59.9 \pm 5.3

Table 3. Identified Themes

Themes from Semi-Structured Interview	Patients Reported
Fear of Sudden Death	89%
Guilt of Passing on a Genetic Mutation to their children	77%
Fear of ICD firing	73%

Genetics is not something separate from the rest of nursing. It's an integral part of what nurses need to know.

—Lynette Wright, clinical associate professor
